

THE PROFESSIONAL MEETING FOR THE RADIOFREQUENCIES,
MICROWAVES, WIRELESS AND OPTICAL FIBRE COMMUNITY

Microwave & RF 2014: An active 3rd edition!

The Microwave & RF Trade show has just closed the doors of its 3rd edition at the CNIT after two well filled days and with the result for most exhibitors of targeted and interesting contacts with highly qualified professionals who visited in view of concrete projects or short and mid term partnerships.

On the visitors' side, stable attendance, as **1 902 visitors** came to discover new products: Microwave systems, targeted concept software, innovating cables and connectors, broad product ranges for CEM, components for industrial applications, testing and measuring equipment, solutions for micro-electronics, radio modules and electronic cards, expertise and test materials,... these are but a few of the numerous innovations presented by the 70 companies, exhibitors and partners who were present in the exhibition.

The highlight of the fair was that the 8 cycles of conferences were followed by 749 listeners - as professional as enthusiastic.

The Microwave & RF conferences provide the best opportunity for the visitors to review technological progress

or particular subjects that require specific and sharp answers. By proposing themes at the core of the audience's concerns, Microwave & RF meets the expectations and questions of the engineers and project managers who are looking for useful information for the concept of their projects. Whether sessions about EMC, new antenna technologies, innovative materials for microwave or radars, the presentations systematically attract a full house!

In parallel, through conferences about applications and products, the exhibitors provide more concrete additional information, with productive exchanges, more focused on the new products, tools and know-how.

With this 3rd edition, Microwave & RF asserts itself as the necessary and essential appointment in the diary of microwave and radiofrequency, wireless and optic fibre professionals, with in addition, an interesting and complementary synergy provided by the neighbouring trade show Solutions Electroniques (RTS Embedded Systems and MtoM).

Next rendezvous: MICROWAVE & RF, 4th edition 1st and 2nd April 2015 - CNIT Paris, France
